Empathy Map Canvas

An empathy map captures a user's behaviours, thoughts and attitudes so the team can design the request process around real needs. This canvas focuses on an employee submitting a network-related service request.

SAYS	THINKS
“I need a network connection or change.” “What details should I provide?” “How can I check the status?”	“I hope I selected the correct request type.” “Will the right team receive this?” “How long will approval take?”

DOES	FEELS
Opens Service Portal; searches the Network category; completes required fields; submits the form; checks email or request status; responds if clarification is requested.	May feel uncertain when fields are unclear or status is hidden; feels reassured by confirmation, clear approvals and timely updates; values a predictable process.

PAINS

- Unclear request channel or form labels.
- Missing details cause delays or repeated questions.
- Uncertainty about approval ownership and request status.
- Manual follow-ups and inconsistent communications.

GAINS

- Simple, guided form with examples.
- Fast confirmation and clear reference number.
- Visible status and transparent approval outcome.
- Reliable completion notification and clear next steps.

Design opportunity

Provide one standard catalog item, conditional fields, required-data validation, automated routing, lifecycle notifications and an understandable status view.
