Automated Network Request Management in ServiceNow

Date	Project Name	Maximum Marks
12 October 2026	Automated Network Request Management in ServiceNow	4 Marks

Project Overview

Project Name: Automated Network Request Management in ServiceNow. Project Description: Configure a Service Catalog request experience and Flow Designer automation to capture network requests, create structured records, route approvals, send notifications and track fulfilment.

UAT roles

Role	Test focus
Requester	Can find and submit the form; receives confirmation and status updates.
Manager / security approver	Receives correct approval and can approve/reject with traceable decision.
Network fulfiller	Can access authorized records/tasks and process approved work.
ServiceNow administrator	Can review flow execution, email logs, ACLs and audit history.

UAT scenarios and acceptance criteria

Test ID	Scenario	Expected result	Actual result / evidence
UAT-01	Submit valid new connection request.	Request item and custom record are created with mapped values.	To be completed during UAT.
UAT-02	Submit form with missing mandatory data.	Validation prevents incomplete submission.	To be completed during UAT.
UAT-03	Choose Existing connection.	Existing ID field displays according to UI policy.	To be completed during UAT.
UAT-04	Submit request needing manager approval.	Approval routes to intended manager.	To be completed during UAT.
UAT-05	Submit sensitive request needing security approval.	Security approval is created according to configured rule.	To be completed during UAT.
UAT-06	Reject an approval.	Rejection path updates state and sends configured notification.	To be completed during UAT.
UAT-07	Approve a request.	Approved path advances to fulfilment and updates records.	To be completed during UAT.
UAT-08	Check access as requester.	Sensitive records/actions are restricted as designed.	To be completed during UAT.

Sign-off

Business owner: _____ Network fulfilment representative: _____ Date: _____ Decision: Accept / Accept with actions / Reject

Important: This is a UAT template. Actual pass/fail status must be filled in after executing the scenarios in the ServiceNow instance.
